Description

By measuring the change in velocity of an acoustic signal, the Ultrasonic Cement Analyzer provides a continuous non-destructive method of determining compressive strength as a function of time while at temperature and pressure.

Features

- Cement samples are not destroyed at time intervals
- Self-venting regulators provide extensive pressure control
- Temperature control (up to 400°F) and pressure control (up to 20,000 PSI) are available to simulate down-hole conditions
- Unique technology results in a cleaner signal, so transit times and data are more accurate
- Data is available instantly on-screen and is automatically downloaded to a Microsoft Excel spreadsheet for easy analysis
